

CUSTOM DESIGN SERIES

IWS-Micro

AuraSound, in recent years has earned a reputation for allowing Sound Contractors, Computer Manufacturers, Home Theater Designers and Auto Sound Competitors the ability to create high quality sound in areas heretofore non existent. This reputation is well earned and due primarily to our proprietary patented technology – NRT.™ NRT™ equates to greater cone excursion & higher thermal capacity allowing us to use a smaller diameter cone and resultant smaller enclosure than many of our competitors. When the application calls for an equal size driver, the results are sound that is both deeper and louder. With all the above in mind, we are proud to present the Crowning Achievement of refining this technology and applying it to Commercial, Residential, Audio and Home Theater applications. We, emphasize Audio because so many of today's sound engineers have abandoned the quest for sonic improvements in audio and simply designed speakers that play loud.

Custom Design Series Micro

AuraSound's new Custom Design Series enables all of our technologies to be applied to the solution of improving In Wall sound. We started with our newly developed IWS-4 to address traditional In-Wall applications and then focused our incredible shrinking ray on it, the result is a marvel of modern sound engineering, proving once and for all "Size Doesn't Matter". We proudly introduce our patented and the worlds First In-Wall Speaker that mounts in a standard "Gang Box," IWS-Micro. The incredibly small drivers in the IWS-Micro are the culmination of years of research and refinement in real world applications and derived from our newly developed Whisper Ensemble. It is a result of "dreaming of things that never were" and asking "why not". This product has no application boundaries and challenges your imagination to find more and more ways to use it. Just imagine all those spaces and rooms previously left uncovered because of size constraints, now imagine that anywhere a single wall outlet or light switch can be installed you can install a high quality full range In-Wall speaker capable of efficiently reproducing all but the lowest range of sound. Staggers the imagination, doesn't it?

Preliminary Features and Specifications (all subject to change)

**CUSTOM DESIGN SERIES
IWS-MICRO**

- 1.25" Micro In Wall System
- Designed for installation in standard gang box
- Perfect solution for getting sound in those hard to fill locations
- 100 watt power handling
- System Frequency Response 150Hz – 20kHz – 6dB
- High sound pressure from a compact design
- Patent pending
- MSRP: \$79.99 each
- Availability: January 2002
